

Operations & Supply Chain Management

Undergraduate Concentration

Operations Management is the functional area of business primarily devoted to the planning, creation, and management of an organization's resources and processes that create products or services. These resources include work force, equipment information, distribution system and materials, all of which typically represent a significant portion of an organization's total costs and controllable assets.

In both manufacturing and service organizations, the Operations Management function has the responsibility for the evolution of the environment from which the organization's product or service is created. At its core, operations and supply chain management transform inputs into outputs.

Concentration Requirements

- ▶ Start with MGT 2250, then MGT 2255, then MGT 3501
- ▶ Take 18 credit hours of Concentration Electives
- ▶ Concentration Elective options and additional information can be found on our website

Why Choose this Concentration?

Operations and supply chain professionals are not just focused on technical details, but rather the broader concepts and 'big picture' outcomes. Professionals in this field have a broad understanding of the relationship between the different business functional areas and are able to communicate across all areas of business.
